

August 2014:

Daytime high and overnight low temperatures remained below normal across the Lake Erie North Shore Appellation. Accordingly, accumulated base 10 °C growing degree days were below normal values for the month. Season accumulated growing degree days remained below normal and 2012 values but were similar to 2013 values. August rainfall averaged 124 % of normal across the appellation with up to 50 mm of rain falling over August 11 – 12.
