

## August 2015:

Across the Niagara appellation, August daytime high temperatures were near or above normal temperatures while overnight lows trended below normal. The resulting accumulated base 10 °C growing degree days were slightly below normal for the month and, as a result, fell to slightly below normal values for the season. The growing degree day accumulation thus far is below 2013 values and above 2014 accumulated values. Areas received up to 46 mm of rainfall on August 18 and up to 34 mm on August 4. As a result, August rainfall averaged 75 % of normal across Niagara West and 103 % of normal across Niagara East.
