

July 2015:

July daytime high temperatures were near or above normal temperatures while overnight lows trended below normal. The resulting accumulated base 10 °C growing degree days were below normal for the month and, as a result, returned to near normal values for the season. The growing degree day accumulation thus far is below 2013 values and above 2014 accumulated values. Rainfall during July fell sporadically throughout the month with daily rainfall measuring 14 mm or less. As a result, July rainfall averaged 48 % of normal across Niagara West and 47 % of normal across Niagara East.
