

## June 2015:

June daytime highs and overnight lows trended below normal. The resulting accumulated base 10 °C growing degree days were below normal for the month while remaining slightly above normal for the season. The growing degree day accumulation thus far is similar to 2013 values and slightly above 2014 accumulated values. Rainfall during June fell mainly on June 8 and 27 with an average of 81 mm of precipitation recorded across the appellation over these two days, accounting for 56 % of the monthly total. As a result, June rainfall averaged 171 % of normal across Niagara West and 180 % of normal across Niagara East.
