

September 2015:

Across the Niagara appellation, September daytime high and overnight low temperatures were above normal. The resulting accumulated base 10 °C growing degree days were above normal for the month and, as a result, returned to above normal values for the season. The growing degree day accumulation thus far is above both 2013 and 2014 accumulated values. Areas received 30 to 70 mm of rainfall on September 12 and up to 24 mm on September 29. As a result, September rainfall averaged 89 % of normal across Niagara West and 104 % of normal across Niagara East.
