

## Prince Edward County - August 2011:

Hot conditions continued throughout the month of August. Accumulated growing degree days remain ahead of normal values as of the end of August (Fig 1). Day-time temperatures averaged above normal for each station (Fig 2). Night-time temperatures averaged above normal for Cherry Valley but below normal for Hillier (Fig 3). The maximum temperature surpassed 30°C during 1 day in Hillier and Cherry Valley, equivalent to the 30-year normal.

Figure 1: Growing Degree Days

The near-normal precipitation levels observed during June and July continued throughout August for Hillier. Cherry Valley, however, received almost twice as much as Hillier (Fig 5), significantly above normal rainfall for the month.
